SUNDAY SKILL & MOBILITY DAY — VISUAL FORM GUIDE

Darebee & GMB-Inspired Anatomical Line-Art Manual: Balance, Straight-Arm Strength, Compression & Tendon Rehab

Duration: 30–35 Minutes
Intensity: **Low CNS (2–3 RIR)**
Equipment: **Floor, Wall, Bar**

1. PURPOSE OF SKILL DAY

Mon/Wed/Fri RR builds mechanical tension and Tue/Thu/Sat builds aerobic capacity. Sunday wires **vestibular balance, straight-arm tendon resilience, and active joint mobility** without taxing recovery.

2. STOP BEFORE SHAKING (2–3 RIR)

Balance is neurological. End every Handstand, Crow, or L-Sit hold **2–3 seconds before form degrades**. Clean holds wire balance; shaky holds wire bad motor patterns.

3. TIMER-BASED BLOCKS

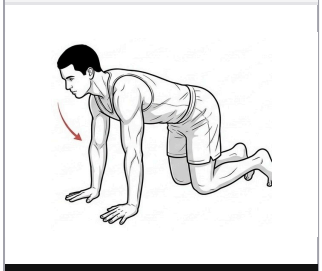

Set a countdown timer (**10 min Handstand**, **5 min Crow**) and accumulate crisp **15–30s holds** with **45–60s rest** between attempts.

BLOCK	TIME	EXERCISE / DRILL	YOUR CURRENT ACTIVE LEVEL (FROM FIT TRACKER)	PRESCRIPTION
1. Prep	0:00–0:05	GMB Wrist Prep + Stick Dislocates	Quadruped wrist rocks/pulses + 10 slow overhead pass-throughs	10 reps each | Smooth
2. Inversion	0:05–0:15	Chest-to-Wall Handstand & Heel Pulls	**L2/L3:** Chest-to-Wall Hold + Finger-Brake Heel Pulls	5–6 × 15–30s | 60s rest
3. Arm Bal	0:15–0:20	Crow Pose → Straight-Arm Crane	**L2:** Crow Pose on floor (5 × 15–30s) → Crane	4–5 × 15–30s | 45s rest
4. Core L	0:20–0:25	Floor L-Sit + Seated Pike Leg Lifts	**L1/L2:** Foot-Supported / 1-Leg L-Sit + Pike Lifts	60s total + 3 × 10s lifts
5. Bar Hang	0:25–0:29	Skin the Cat → German Hang	Tuck inversion through arms → controlled German Hang	2–3 × 3–5 slow reps
6. Rehab	0:29–0:35	Couch Stretch + Soleus / Ankle Iso	Hip flexor unlock + **Achilles/Ankle Tendonitis Rehab**	60s/side + 3 × 30s iso

BLOCK 1: WRIST & SHOULDER ARTICULAR PREP (5 MINUTES)

Mandatory Before Handstands, Crow Pose & Floor L-Sits

1A. GMB QUADRUPED WRIST PREP

ELBOWS 100% LOCKED — ROCK OVER SPREAD FINGERS

1A. GMB Quadruped Wrist Prep

10 Reps × 4 Directions

- **Setup:** On hands and knees, spread fingers wide and **lock elbows 100% straight** (bent elbows steal the stretch from the wrists).
- **4 Angles:** (1) Forward shoulder rocks over fingertips; (2) First-knuckle palm heel lifts; (3) Fingers pointing backward toward knees; (4) Back-of-hand stretch.
- ✓ **Goal:** Prepare wrist flexors and joint capsule for 90°+ extension under load.

1B. STICK / TOWEL DISLOCATES

SHRUG UP OVERHEAD — KEEP RIBS TUCKED DOWN

1B. Towel / Stick Shoulder Dislocates

10 Slow Reps

- **100% Band-Free Option:** Hold a broomstick, dowel, or bath towel pulled taut with a wide overhand grip.
- **Execution:** Keep elbows locked straight, **shrug shoulders up** as arms pass overhead, and keep lower ribs tucked down (PPT) so your lower back never arches.
- ✓ **Goal:** Opens chest and anterior shoulder capsule before Handstands and German Hangs.

BLOCK 2: HANDSTAND & OVERHEAD BALANCE PROGRESSION (10-MINUTE TIMER)

Accumulate 5–6 Crisp Holds of 15–30s — Rest 60s Between Holds

2A. CHEST-TO-WALL HANDSTAND

FACE WALL — PUSH FLOOR AWAY — LOCK PPT

2A. Chest-to-Wall Handstand Hold

5–6 × 15–30s

- **Always Face the Wall:** Walking feet up **chest-to-wall** enforces a straight hollow line (kicking up back-to-wall teaches a banana arch).
- **3 Key Cues:** (1) Push floor away hard (**elevate shoulders into ears**); (2) Tuck tailbone (PPT) & squeeze glutes; (3) Only tops of toes touch the wall.

Ladder: L1: 45° Wall Plank (60s) → L2: Chest-to-Wall (30s) → L3: Heel Pulls → L4: Freestanding

2B. WALL HEEL PULLS (FINGER BRAKES)

PRESS FINGERTIPS TO FLOAT TOES 2 CM OFF WALL

2B. Wall Heel Pulls ("Finger Brakes")

Freestanding Drill

- **How Handstand Balance Works:** Your fingertips act as your front brakes to stop over-balancing.
- **Execution:** From Chest-to-Wall Handstand (hands 8 cm from wall), **claw your fingertips hard into the floor** with straight arms until your toes **float 1–2 cm off the wall for 2–5 seconds**.

Safety: Come down with 3–5s in reserve so you can walk down cleanly.

BLOCK 3: CROW POSE → CRANE POSE PROGRESSION (5-MINUTE TIMER)

Builds Wrist Endurance, Anterior Deltoid Strength & Forward-Lean Control

3A. CROW POSE (BENT ELBOW SHELF)

KNEES ON TRICEPS — GAZE 30 CM AHEAD

3A. Crow Pose / Frog Stand (Bent Arms)

ACTIVE: L2 (5×15–30s)

- **Setup:** Squat down, place palms shoulder-width apart with cambered fingers gripping the floor.
- **Execution:** Rest knees on backs of triceps, bend elbows slightly to form a shelf, and lean shoulders forward while **gazing 30 cm ahead on the floor** until feet float up.
- ✕ **Fault:** Looking straight down or tucking chin causes you to somersault forward!

3B. CRANE POSE (LOCKED ARMS)

STRAIGHT ARMS — KNEES HIGH IN ARMPITS

3B. Crane Pose (Straight-Arm Bakasana)

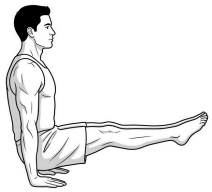

Level 3–4 Upgrade

- **What Changes in Crane:** Tuck knees high into your armpits, **lock elbows 100% straight**, push upper back toward the ceiling (max scapular protraction), and drive hips high.
- **Transfer:** Builds elite straight-arm scapular protraction for Planche leans and handstand presses.
- **Target:** Once **3 × 30s Crow** is solid, practice **5–10s straight-arm Crane holds**.

BLOCK 4: L-SIT & ACTIVE PIKE COMPRESSION (5 MINUTES)

Scapular Depression + Core / Hip-Flexor Compression Strength

4A. FLOOR L-SIT PROGRESSION

PALMS BESIDE HIPS — DEPRESS SHOULDERS HARD

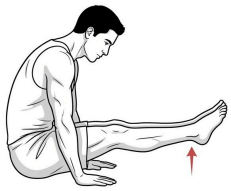

4A. Floor L-Sit Progression Ladder

60s Total Hold

- **Setup:** Sit tall with legs extended. Place palms flat on the floor (or on two books) beside your mid-thighs/hips.
- **Key Cue:** Lock elbows straight and **push shoulders DOWN hard away from ears** (scapular depression) to float hips and legs off the floor.
- **Accumulate 60s total** across sets (e.g., 4 × 15s or 3 × 20s).

Ladder: L1: Foot-Supported (60s) → L2: 1-Leg Assisted → L3: Tuck L-Sit → L4: Full L-Sit

4B. SEATED PIKE COMPRESSION LIFTS

HANDS PAST KNEES — LIFT LOCKED LEGS

4B. Seated Pike Compression Leg Lifts

3 × 10s or 10 Reps

- **Why It's Essential:** Full L-Sits fail when your hip flexors (iliopsoas + rectus femoris) can't hold straight legs at a 90° pike.
- **Execution:** Sit in a pike, fold torso slightly forward, and place fingertips on the floor **beside your knees/shins**.
- Without leaning backward, lock knees, point toes, and lift both heels 5–10 cm off the floor for **10 seconds** (quad cramping is normal at first!).

BLOCK 5: SKIN THE CAT & GERMAN HANG ON PULL-UP BAR (3–4 MINUTES)

Bulletproofs Biceps Tendons, Pecs & Anterior Shoulders in Full Extension

5A. SKIN THE CAT TUCK PASS

OVERHAND GRIP — TUCK KNEES THROUGH ARMS

5A. Skin the Cat Tuck Inversion

2–3 × 3–5 Slow Reps

- **Setup:** Hang from pull-up bar with an **overhand (pronated) grip** and locked straight arms.
- **Execution:** Depress scapulae, tuck knees tightly to chest, and press straight arms down to rotate backward through your arms.
- ✓ **Strength Bonus:** Pulling out of the inverted tuck builds the exact straight-arm lat power needed for Front Levers.

5B. CONTROLLED GERMAN HANG

ELBOWS LOCKED — MILD 5/10 PEC/BICEP STRETCH

5B. Controlled German Hang Stretch

3–5s Bottom Hold

- **Descent:** Once feet pass through your arms, slowly lower hips into shoulder extension while keeping **elbows 100% locked**.
- **Intensity Cap:** Stop at a **mild 5/10 stretch** across your chest and biceps tendons (keep a chair/sofa under your feet for light support if needed).
- Tuck knees and pull hips back over to dead hang.

BLOCK 6: RUNNER'S MOBILITY & ANKLE TENDON REHAB (5–7 MINUTES)

Unlocks Hip Extension & Directly Rehabs Ankle / Achilles Tendons (Flagged Oct 22)

6A. KNEELING COUCH STRETCH

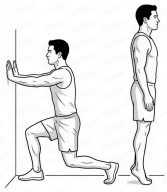

TUCK TAILBONE (PPT) & SQUEEZE REAR GLUTE

6A. Kneeling Couch Stretch

60s / Side

- **Why Runners Need It:** 25k steps/day + running + Step-Ups shorten the psoas and rectus femoris, pulling on the pelvis and lower back.
- **Setup:** Place rear knee on a cushion at the base of a wall/sofa (shin vertical up the wall) and front foot in a 90° lunge.
- **Key Cue: Tuck tailbone under (PPT) and squeeze the rear glute 100%** BEFORE bringing torso upright. Hold 60s/side.

6B. SOLEUS DRIVE + ISO CALF HOLD

60s SOLEUS STRETCH + 3×30s ANKLE TENDON HOLD

6B. Soleus Wall Drive + Iso Tendon Hold

Ankle Tendon Care

- **1. Bent-Knee Soleus Stretch (60s/side):** Foot 8–10 cm from wall; drive bent knee toward wall with heel flat on floor to release deep soleus tension.
- **2. Isometric Calf/Ankle Hold (3 × 30s/side):** Irritated ankle tendons (flagged Oct 22) dislike fast bouncing, but **30-second mid-range isometric heel-raise holds** provide immediate tendon analgesia and stimulate collagen stiffening.

Sunday Session Checklist (~32 mins total): (1) **Wrist & Stick Prep** 5m → (2) **Chest-to-Wall Handstand & Heel Pulls** 10m timer → (3) **Crow / Crane Pose** 5m timer → (4) **L-Sit (60s total) + Pike Lifts (3×10s)** 5m → (5) **Skin the Cat / German Hang** 2–3×3–5 reps → (6) **Couch Stretch + 3×30s Ankle Tendon Iso Holds** 5m.
